

NUCLEAR AMRC

# Nuclear Supply Opportunities for Yorkshire

The UK is embarking on its largest ever investment in new nuclear power stations, with a total value of around £40 billion. A further £2.9 billion a year is being spent to decommission existing nuclear plant.

The civil nuclear market presents huge opportunities for manufacturing SMEs to win new business and secure a place in supply chains with global reach.

To help you assess this market, the Nuclear AMRC invites you to join a new programme designed exclusively for manufacturing SMEs.

The one-day **Nuclear Supply Opportunities** workshop will introduce you to the nuclear industry, giving you the information you need to make the strategic decision on whether to step into this market.

You will then be invited to participate in a one-to-one Nuclear Diagnostic Assessment, measuring your company's performance against the standards demanded by the nuclear industry and highlighting any areas for change.

These assessments are carried out by established nuclear and manufacturing experts, who will follow up the assessment with a visit to your company to conduct a full review.

The **Nuclear Supply Opportunities for Yorkshire** programme is free for SMEs based in the Yorkshire and Humber region.

**Nuclear Supply Opportunities for Yorkshire** is a regional initiative from the **Nuclear AMRC**, delivered by **Director Resource** and **Brook Corporate Developments**.

# Nuclear Supply Opportunities for Yorkshire

## Workshop agenda

### *Introduction to nuclear and the benefits of getting involved*

What's happening in the nuclear sector, what opportunities are available, and how manufacturing SMEs can become Tier 3, 4 and 5 suppliers.

### *Overview of manufacturing requirements*

An introduction to the minimum requirements that Tier 1 and 2 companies expect from suppliers. These fall into five key areas:

- Quality management
- Health & safety
- Process excellence
- People, leadership & culture
- Performance & results

You will be given the opportunity to conduct a self-assessment on your company to see where you are now in terms of supply chain readiness.

### *One-to-one Nuclear Diagnostic Assessments*

Now you know the industry leaders' expectations, you can measure your company's performance and discover what changes you will need to make to meet industry requirements.

### *Arrange free company review*

One of our experts can visit your business following the workshop, and spend half a day on site with you conducting a full company review. They will then present you with their findings, and can work with you as appropriate to help you become a Tier 3, 4 or 5 supplier in the nuclear manufacturing supply chain.

---

## Who should attend?

The **Nuclear Supply Opportunities** workshops are aimed at senior decision-makers within manufacturing SMEs in the Yorkshire and Humber region. They will be of particular interest to companies working in engineering, fabrication and welding, and manufacturers of smaller components such as valves, vessels, seals and bearings.

---

### **Workshops are held monthly at the Nuclear AMRC.**

To book your place on the next workshop, please contact Brook Corporate Developments on 01226 240435 or [info@brookconsult.co.uk](mailto:info@brookconsult.co.uk)

Places are limited. Please book early to avoid disappointment.
